Projects & Responsibilities

Invoice Matching Process

Jan'2018 -Present

Invoice Matching Process is a one of the process which I have handled, in this process there are two applications one is dataserv, another one is OracleEBS Application, need to take Invoice data from the dataserv and matching those Invoice details in EBS application if those details are matched in oracleEBS application, need to update the record status in dataserv application.

As a Developer, I was involved into client KT sessions, refine Process Design documents and develop reports/ process using UiPath tool.

Client	: VertivCO
Environment	: UiPath, Excel 2013, Web Applications, Oracle.
Role	: Associate Consultant

Responsibilities:

- Involved in code development on the basis of client requirements by studying design and functional documents.
- Created PDD's and SDD's documents for automation.
- Developed reusable libraries.
- Development and technical assistance on UiPath.
- Do feasibility study for automation with UiPath.
- Involved in unit testing and integration testing of various modules.
- Involved in defect fixing that was assigned by QA team.
- Prepared the documentation for functional test cases for various modules.
- Involved in providing production support.

Salary Approval Process

Nov'2017 – Jan'2018

The salary approval process is followed for new hires in the company. It is used by Recruitment to get approvals on new joiners. Through this process, we plan to automate the C&B approval part of the process. This involves steps like evaluating the salary in terms of skill, experience, designation, etc. and then providing appropriate comments to the hiring Practice.

Client : Capgemini.
Environment : UiPath, Excel 2013.
Role : Associate Consultant

Responsibilities:

- Involved in code development on the basis of client requirements by studying design and functional documents.
- Created PDD's and SDD's documents for automation.
- Developed reusable libraries.
- Development and technical assistance on UiPath.
- Do feasibility study for automation with UiPath.
- Involved in unit testing and integration testing of various modules.
- Involved in defect fixing that was assigned by QA team.
- Prepared the documentation for functional test cases for various modules.
- Involved in providing production support.

Prudential Financial, Inc. - IT

Aug'2016 – Aug, 2017

Prudential Financial, Inc. - IT consists of multiple modules/applications with .Net, Mainframe, Windows Scripting, and SSIS as the primary technologies. Interface Scheduler is a Windows service developed for replacing client's traditional Autosys scheduler for performing time bound activities. This windows service is developed in such a manner that it executes many batch scripts, dot net applications and SSIS packages throughout the day according to time on which it is scheduled. It also loads data based on feed coming from Inspro.

Client : Prudential.
Environment : C#, Batch Scripting, SQL Server,
Role : Software Engineer.

Responsibilities:

- Involved in code development on the basis of client requirements by studying design and functional documents.
- Involved in coding of batch scripting
- Involved in Writing different SQL server scripts
- Developed reusable libraries.
- Involved in unit testing and integration testing of various modules.
- Involved in defect fixing that was assigned by QA team.
- Prepared the documentation for functional test cases for various modules.
- Involved in providing production support.
